| Spezies Reaktivität      | Human                                                                                                                                                                                                                                                         |
| Immunogen                | Spleen cells of a patient with hairy cell leukemia                                                                                                                                                                                                            |
| Produktbeschreibung      | Recognizes a protein of 33-55kDa, identified as CD37 (Workshop V, Code CD37.7). CD37 is strongly expressed on normal and neoplastic mature (slg+) B-lymphocytes. In B-cell ontogeny, CD37 appears after the pre-B-cell stage, is maintained during periphe... |
| Klonalität               | Monoclonal                                                                                                                                                                                                                                                    |
