| Immunogen                | Human MAGE-A1 full length recombinant protein                                                                                                                                                                                                                 |
| Produktbeschreibung      | Recognizes a protein of 42-46 kDa, identified as MAGE-1. This MAb does not cross-react with MAGE-2, -3, -4, -6 -9, -10, -or -12 protein. Human malignant neoplasms carry rejection antigens that are recognized by the patients autologous, tumor directed... |
