| Immunogen                | Synthesized peptide derived from human Histone H4 (Di Methyl Lys21)                                                                                                                                                                                           |
| Produktbeschreibung      | function:Core component of nucleosome. Nucleosomes wrap and compact DNA into chromatin, limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repa... |
