| Immunogen                | The antiserum was produced against synthesized peptide derived from human NM23-H1. AA range:3-52                                                                                                                                                              |
| Produktbeschreibung      | This gene (NME1) was identified because of its reduced mRNA transcript levels in highly metastatic cells. Nucleoside diphosphate kinase (NDK) exists as a hexamer composed of A (encoded by this gene) and B (encoded by NME2) isoforms. Mutations in this... |
