| Produktbeschreibung      | Interleukin-23 (IL-23) is a heterodimeric cytokine that belongs to the IL-12 cytokine family. It is composed of two subunits, p19 and p40, with the p40 subunit being shared with IL-12. IL-23 is primarily secreted by activated macrophages and dendriti...                      |
| Molekulargewicht         | 55.0 kDa(IL-23singlechain),36.5 kDa(p40)&18.5 kDa(p19)                                                                                                                                                                                                                             |
| NCBI                     | <a href="#">29460</a>                                                                                                                                                                                                                                                              |
| Reinheit                 | Greater than 95% as determined by reducing SDS-PAGE                                                                                                                                                                                                                                |
| Anwendungsbeschreibung   | Always centrifuge tubes before opening.Do not mix by vortex or pipetting.It is not recommended to reconstitute to a concentration less than 100µg/ml.Dissolve the lyophilized protein in distilled water.Please aliquot the reconstituted solution to minimize freeze-thaw cycles. |
