| Produktbeschreibung      | This gene encodes a member of the insulin-like growth factor 2 mRNA-binding protein family. The protein encoded by this gene contains four K homology domains and two RNA recognition motifs. It functions by binding to the mRNAs of certain genes, inclu... |
| Klonalität               | Monoclonal                                                                                                                                                                                                                                                    |
