| Hersteller               | Echelon Biosciences                                                                                                                                                                                                                                           |
| Kategorie                | Molekularbiologie                                                                                                                                                                                                                                             |
| Produktbeschreibung      | PolyPIPosomes are polymerized liposomes that show markedly increased stability (up to 6 months) vs. conventional liposomes. A biotin tag is incorporated for easy detection of PIPn-binding proteins with streptavidin reagents. - Uniform size (~200 nm) ... |
| Anwendungsbeschreibung   | Categories: Biochemical Reagents. Related: Phosphoinositides, PI(3,4)P2, PolyPIPosomes. Ship 1 : Shipping Temp. Ship 2: Gel Ice                                                                                                                               |
