| Spezies Reaktivität      | Virus                                                                                                                                                                                                                                                                              |
| Produktbeschreibung      | Chikungunya virus (CHIKV) is a mosquito-borne alphavirus responsible for Chikungunya fever, a disease marked by fever, rash, and joint pain. The E1 envelope glycoprotein, a 47 kDa class II fusion protein, plays a critical role in viral entry by media...                      |
| Molekulargewicht         | 73.11 kDa                                                                                                                                                                                                                                                                          |
| NCBI                     | <a href="#">8</a>                                                                                                                                                                                                                                                                  |
| Reinheit                 | >90% as determined by SDS-PAGE.                                                                                                                                                                                                                                                    |
| Anwendungsbeschreibung   | Always centrifuge tubes before opening.Do not mix by vortex or pipetting.It is not recommended to reconstitute to a concentration less than 100µg/ml.Dissolve the lyophilized protein in distilled water.Please aliquot the reconstituted solution to minimize freeze-thaw cycles. |
