Anwendungsbeschreibung	Extracellular superoxide dismutase [Cu-Zn] is an enzyme that in humans is encoded by the SOD3 gene. This gene encodes a member of the superoxide dismutase (SOD) protein family. SODs are antioxidant enzymes that catalyze the dismutation of two superoxide radicals into hydrogen peroxide and oxygen. According to the report, in a weakly alkaline buffer solution (pH 8.2) with N-tris (hydroxymethyl) amino methane-HCL, pyrogallol can occur autooxidation in the air, then SOD can inhibit this reaction. Thus, using this way to measure the activity of recombinant mouse SOD3. The reaction was performed in adding 30 µl pyrogallol (50 mmol/l) to 900 µl Tris-HCl (50 mmol/l) in 1.5ml cuvette (1.0cm light path), rapidly mixing at 25C, then read at 325nm (zero the spectrophotometer using 50 mmol/l Tris-HCl), record the OD value every 30 second for 6 times. Control the pyrogallol autooxidation rate at 0.70 OD/min. After, adding various concentrations of recombinant of SOD3 to 900 µl Tris-HCl (50 mmol/l), incubated for 20min at 25C, then adding 30 µl (50 mmol/l) pyrogallol to each tube, rapidly mixing and read at 325nm, record the OD value every 30 second for 6 times. Under these conditions, the enzyme amount of 50% per minute inhibition of pyrogallol autooxidation is defined as a unit. The specific activity of recombinant mouse SOD3 is 273.8 U/mg.
