| Kategorie                | Molekularbiologie                                                                                                                                                                                                                                             |
| Produktbeschreibung      | The Type II prokaryotic CRISPR/Cas system is the new class of tools for targeted genome engineering. The cas9 nucleases derived from clustered regularly interspaced short palindromic repeats (CRISPR)-cas systems uses small RNAs as guides (gRNA) to cl... |
| Konzentration            | 1x10 <sup>10</sup> PFU/ml                                                                                                                                                                                                                                     |
| Puffer                   | DMEM, 2% BSA, 2.5% Glycerol                                                                                                                                                                                                                                   |
