| Produktbeschreibung      | CheKine(TM) beta-Amylase Activity Colorimetric Assay Kitis designed for beta-Amylase Activity detecting in the sample....                                                                                                                                                                                                                                                                                        |
| Detektionsbereich        | 0.0156-1 mg/mL                                                                                                                                                                                                                                                                                                                                                                                                   |
| Sensitivitaet            | 0.0078 mg/mL                                                                                                                                                                                                                                                                                                                                                                                                     |
| Tag                      | beta-Amylase                                                                                                                                                                                                                                                                                                                                                                                                     |
| Anwendungsbeschreibung   | CheKine(TM) Micro beta-Amylase Activity Assay Kit provides a convenient tool for detection of beta-Amylase Activity. The principle is that amylase catalyzes the hydrolysis of starch to produce reducing sugar, which reduces 3, 5-dinitrosalicylic acid to produce brown-red material, with an absorption peak at 540 nm. Amylase activity was calculated by measuring the absorbance increase rate at 540 nm. |
