## Product Datasheet

### Heclin, CAS [[890605-54-6]] FBM-10-1534

Artikelname	Heclin, CAS [[890605-54-6]]
Artikelnummer	FBM-10-1534
Hersteller Artikelnummer	10-1534
Alternativnummer	FBM-10-1534-5MG,FBM-10-1534-25MG
Hersteller	Focus Biomolecules
Kategorie	Biochemikalien
Produktbeschreibung	HECT domain containing E3 ubiquitin ligase inhibitor...
Molekulargewicht	283.33
Reinheit	98% by TLC, NMR (Conforms)
Formulierung	Beige solid
CAS Nummer	[890605-54-6]
Formel	C17H17NO3

Anwendungsbeschreibung

The first small molecule inhibitor of the HECT domain-containing E3 ubiquitin ligases. Heclin (HECT ligase inhibitor) inhibits several HECT ligases in cultured cells, IC50s = 6.8, 6.3 and 6.9 M for Smurf2, Nedd4 and WWP1 respectively. It does not block E2 binding but causes a conformational change which results in oxidation of the active site cysteine. Cells tolerate heclin treatment for several hours but exposure for 24 hours leads to death in HEK293 cells, consistent with an essential role for HECT ligase activity in mammalian cells. Heclin does not inhibit RING domain ligases.<sup>1</sup> Thus it is a valuable tool for distinguishing between RING and HECT-mediated ubiquitination. Prevents proteasomal degradation of thioredoxin-interacting protein after microbial infection with subsequent reduction of pro-inflammatory mediators.<sup>2</sup> Improves short-term memory, consolidation, retrieval and reconsolidation of contextual fear in rodent models.<sup>3</sup>
