Anwendungsbeschreibung	MRTX849 is a potent (IC50s = 14 nM NCI-H358, 5 nM MIA PaCa-2) and selective (over 463 proteins 1 μM) covalent KRASG12C inhibitor.¹ It showed pronounced tumor regression in 17 of 26 KRASG12C-positive cell lines and xenograft models from multiple tumor types.² MRTX849 reversed the immunosuppressive tumor environment in a genetically modified mouse model and sensitized tumors to checkpoint inhibitor therapy in a genetically modified mouse KRASG12C lung adenocarcinoma model.³ It reversed ABCB1-mediated multidrug resistance in vitro and in vivo via attenuating ABCB1 efflux in drug-resistant cancer cells.⁴
