| Kategorie                | Molekularbiologie                                                                                                                                                                                                                                                         |
| Produktbeschreibung      | Thrombospondin is a high-molecular weight, heparin-binding glycoprotein constituent of human platelets. Ranging from 30-50ug per 10 <sup>9</sup> platelets, thrombospondin is one of the most abundant proteins in the platelet a-granule. Thrombospondin was initiall... |
| Molekulargewicht         | 450000                                                                                                                                                                                                                                                                    |
| Reinheit                 | 95% by SDS-PAGE. Human thrombospondin is prepared from the supernatant of activated platelets by heparin-agarose affinity and gel filtration chromatography. Purity is assessed by SDS-PAGE analysis                                                                      |
| Formulierung             | Supplied as a liquid in 50% glycerol, ddH <sub>2</sub> O.                                                                                                                                                                                                                 |
