| Hersteller               | Abeomics                                                                                                                                                                                                                                                      |
| Kategorie                | Antikörper                                                                                                                                                                                                                                                    |
| Applikation              | ELISA                                                                                                                                                                                                                                                         |
| Produktbeschreibung      | The spike (S) glycoprotein of coronaviruses contains protrusions that will only bind to certain receptors on the host cell. Known receptors bind S1 are ACE2, angiotensin-converting enzyme 2, DPP4, dipeptidyl peptidase-4, APN, aminopeptidase N, CEACAM... |
| Klonalität               | Monoclonal                                                                                                                                                                                                                                                    |
| Reinheit                 | Protein A                                                                                                                                                                                                                                                     |
| Application Verdünnung   | ELISA 1:5000-1:10000 Specificity: 2019-nCoV CoV spike/S Has cross-reactivity in ELISA with SARS Coronavirus Spike Protein (S1 Subunit), SARS Coronavirus Spike RBD                                                                                            |
