| Category                   | Proteine/Peptide                                                                                                                                                                                                                                              |
| Conjugation                | FITC                                                                                                                                                                                                                                                          |
| Product Description        | As an efficient counterstain for cell an tissue substrates with immunoconjugates with a label contrasting with the greenish-yellow fluorescence of BSA/FITC. The purpose of counterstaining is to enhance the optical contrast of the immunospecific stain... |
| Buffer                     | Fluorochrome-coupled bovine serum albumin, fraction V, lyophilized from a solution in phosphate buffered saline (PBS pH 7.2). It is reconstituted by adding 1 ml sterile distilled water.                                                                     |
| Form                       | FITC                                                                                                                                                                                                                                                          |
| Formula                    | Fluorochrome-coupled bovine serum albumin, fraction V, lyophilized from a solution in phosphate buffered saline (PBS pH 7.2).                                                                                                                                 |
| Application Notes          | ELISA,Immunocytochemistry,Immunohistochemistry (frozen),(In)direct immunofluorescence.                                                                                                                                                                        |
