Application Notes

WesternBlot: To detect Rat GRO/KC by Western Blot analysis this antibody can be used at a concentration of 0.1-0.2 µg/ml. When used in conjunction with compatible secondary reagents, the detection limit for recombinant Rat GRO/KC is 1.5-3.0 ng/lane, under either reducing or non-reducing conditions.. Sandwich: To detect Rat GRO/KC by sandwich ELISA (using 100 µl/well antibody solution) a concentration of 0.5 - 2.0 µg/ml of this antibody is required. This antigen affinity purified antibody, in conjunction with BioGems Biotinylated Anti-Rat GRO/KC (62-059BT) as a detection antibody, allows the detection of at least 0.2 - 0.4 ng/well of recombinant Rat GRO/KC.. Neutralization: To yield one-half maximal inhibition [ND<span style=font-size: 16px,>50] of the biological activity of Rat GRO/KC (100 ng/ml), a concentration of 5.0-10.0 µg/ml of this antibody is required.. Reconstitution: Centrifuge vial prior to opening. Reconstitute in sterile water to a concentration of 0.1-1.0 mg/ml.
