| Category                   | Biochemikalien                                                                                                                                                                                                                                                |
| Product Description        | N7-Methyl-2-O-(2-methoxyethyl) guanosine is a purine nucleoside analog. Purine nucleoside analogs have broad antitumor activity targeting indolent lymphoid malignancies. Anticancer mechanisms in this process rely on inhibition of DNA synthesis, induc... |
| Molecular Weight           | 355.35                                                                                                                                                                                                                                                        |
| Formula                    | C14H21N5O6                                                                                                                                                                                                                                                    |
| Target                     | Nucleoside Antimetabolite/Analog                                                                                                                                                                                                                              |
| Application Notes          | MCE Product type: Oligonucleotides                                                                                                                                                                                                                            |
