Application Notes	IL17B (Interleukin-17B) is is a T cell-derived cytokine that shares sequence similarity with IL17, which has been proven to mediate potent inflammatory immune response. Besides, increasing evidence suggests that IL17 may play a critical role in various kinds of liver diseases, including hepatocellular carcinoma. Thus a stimulation assay has been conducted to detect the bioactivity of IL17B. HepG2 cells were seeded into 24-well plate at a density of 1×10^5 cells/ml, and allowed to attach overnight before treated with or without certain concentrations (250 ng/ml, 500 ng/ml) of IL17B for 20h and IL-8 levels in the cell supernatant were determined by ELISA.
