| Category                   | Molekularbiologie                                                                                                                                                                                                                                             |
| Product Description        | Cas9 is the nuclease guided by the crRNA and tracrRNA (or trans-activating crRNA) to cleave specific DNA sequences. A guide RNA (gRNA) can be designed to include a hairpin that mimics the tracrRNA-crRNA complex. Binding specificity is based on the gR... |
| Concentration              | 1x10 <sup>10</sup> PFU/ml                                                                                                                                                                                                                                     |
| Buffer                     | DMEM, 2% BSA, 2.5% Glycerol                                                                                                                                                                                                                                   |
