| Category                   | Kits/Assays                                                                                                                                                                                                                                                                             |
| Product Description        | Na <sup>+</sup> K <sup>+</sup> -ATPase (red blood cell ) is commonly studied in biochemical and cellular metabolism research to quantify pathway activity and characterize functional changes during disease, stress, or drug treatment. This microplate-based assay kit is designed... |
| Samples                    | Serum, Plasma, Cell Culture Supernatant and other biological samples.                                                                                                                                                                                                                   |
